

Extending “EduSchema” to full-fledged working application.

You have to develop a complete application called as ‘EduSchema’. Use the database developed in previous project and then use core Python to connect with this database. Following are the other details:

- **Description:** Develop a complete application for managing courses, students and instructors in an online learning platform.

This application must have following features:

- a. **Course Management:** Add, update, remove, search and sort courses
 - b. **Instructors management:** manage instructors profile and assign instructors to courses
 - c. **Student enrolment:** Allow students to enrol in courses and track their progress
 - d. **Assessment and grades:** Create and manage assessments and input and view grades.
- **Concepts used:** Use Core Python to connect with database. Your projects would be rated on the basis of “how easy it is for a user to go through any of the process in your application.”
